Fund Performance	Objective	Excess Return
▲ 0.47%	▲ 0.19%	▲ 0.29%

In May, risk assets continued to perform strongly as resilient economic data and continued momentum in technology stocks supported sentiment despite ongoing geopolitical tensions in the Middle East. Oil markets remained volatile throughout the month and partially retreated on hopes of de-escalation and easing of supply restrictions. Within equities, growth outperformed value again and several US indices, including the Nasdaq 100, reached new all-time highs. Emerging markets outperformed developed markets, supported by strong growth across Asian technology exporters. The US Dollar Index strengthened, as sticky US inflation drove markets to reprice Fed policy from cuts to potential hikes. Within sovereigns, US yields moved higher over the month, particularly on the short end, reflecting repricing of the FED expectations.

SOVEREIGN BONDS - EXPOSURE & CURVE STRATEGIES

Exposure to sovereign bonds in local and hard currencies, expressed in modified duration basis point (mdbps). The local bonds are split into different time horizons to exhibit yield curve strategies. For a modified duration of +100bps in the tab below and a -1% decrease of interest rates, the portfolio's performance is +1%.

	Hard Debt	Local debt				Total (mdbps)	Total Bonds (% of assets)	Total Futures (% of assets)	Total (% of assets)
		Total	1-3 years	3-7 years	7-15 years

PROCEED-WEIGHTED YIELD

1 year performance in unchanged market conditions.

CURRENCIES

The investment team starts with a directional view on the USD versus the 3 currency blocs (European, Yen and Commodities). Inter-bloc (excluding USD) and Intra-bloc strategies are then implemented. Specific exposures are allocated on Emerging currencies. The sum of all currencies is 0%, and numbers express % of net assets.

GLOSSARY

Ex-Ante Value-at-Risk (99%, 20D)

Maximum potential loss that a portfolio may incur over a given time horizon, with a given probability under markets following a normal distribution. Ex: if the VaR(99%; 20d) = 10% over the next 20 days, there is a 99% chance that the portfolio will not lose more than 10% of its value.

Volatility

Term used to describe the extent to which the price of a fund varies within a specific timeframe. It serves as a measure of risk and is determined by calculating the standard deviation, which is the square root of the variance. The variance is obtained by averaging the differences between each value and the mean, which are then squared. Higher volatility indicates higher risk.

PRIIPs SRI

Guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. The risk indicator assumes you keep the product for its recommended investment horizon. The actual risk can vary significantly if you exit before maturity and you may get back less.

Modified Duration

Risk attached to a given change in the interest rate. For example, for a modified duration of +1 and a 1% increase of the interest rate, the portfolio's value would drop by 1%. Inversely, for a modified duration of -1% and a 1% rate increase, the portfolio's value would increase by 1%.

Proceed-Weighted Yield

1 year performance in unchanged market conditions.

Sharpe Ratio

Excess return divided by the standard deviation of this return. It thus shows the marginal return per unit of risk.

Maximum Drawdown

Maximum loss since inception

Sortino Ratio

Excess return divided by the negative standard deviation of this return.

MAIN RISKS OF THE FUND

The Fund is exposed to specific risks, including: the risk of capital loss, discretionary management, credit, interest rate, counterparty, volatility, exchange rates as well as arbitrage, overexposure and investment in emerging markets.

The capital invested is not guaranteed. For a more complete description of risks, please refer to the prospectus or to any other legal documentation of the Fund which is available on our website: www.h2o-am.com
