HR-C	SEK	FR0013187929

managed by H2O Asset Management LLP, of the following changes:

1. Increase of the Fund's indicative average leverage level

The indicative average leverage level for the UCITS, which is currently 5, will rise to 20.

This not only aggregates the gross commitment generated by the long and short positions of financial contracts on the interest rate markets, but also that generated by the currency positions.

2. Increase of the target average annual ex post volatility

The average annual ex post volatility, which currently ranges between 12% and 20%, has increased and will now range between 15% and 25%.

The increase of the target average annual ex post volatility is a result of the increase in the short-term volatility of the markets.

3. Change to subscription fees

The 5% subscription fee retained by the UCITS has been replaced by a 5% subscription fee reserved for the Management Company.

These changes will have no impact on the other characteristics of the UCITS, which remain unchanged.

The first two amendments will take effect on 5 August 2019, while the amendment regarding the subscription fee will take effect on 2 September 2019.
