- Average indicative leverage: it is modified and increased from 11 to 17 in order to take into account all portfolio hedging strategies. As a reminder, this gearing level is indicative, and bears no impact on the risk profile of the fund that remains unchanged;
- Reference interest rates used to hedge the units denominated in Swiss franc (CHF) and in US dollar (USD) back into euro (EUR): as the EONIA, CHF LIBOR and USD LIBOR rates should cease to exist soon, they are being replaced by the ESTER, SARON and SOFR respectively versus the 1-month EURIBOR.
